

In Situ Archaeological Consulting, LLC

Cultural Resource Management consultation is most effective when it is considered at the start of a project rather than as a response to conflicts that arise mid-project. Our qualified archaeologists work with clients to evaluate and develop the optimal approach for conducting field investigations and obtaining agency clearances.

In Situ Archaeological Consulting is a minority owned, small business cultural resource management consulting company that specializes in archaeological surveys and laboratory analysis. Our mission is to provide our clients with quality archaeological consultation to facilitate success in their undertakings.

Our Staff

We meet the requirements of the Secretary of the Interior’s Standards and Guidelines and are qualified to lead and conduct archaeological investigations in multiple states, including, but not limited to, Minnesota, North Dakota, South Dakota, Iowa, and Wisconsin. Our specialists will work with you to assess the distinctive conditions of your project and make recommendations to ensure compliance and minimize unnecessary costs and lost time. We strive to provide our clients with quality and comprehensive services.
